

Big Data and the Evolution of Precision Medicine

Dr. George Poste

Chief Scientist, Complex Adaptive Systems Initiative
and Del E. Webb Chair in Health Innovation

Arizona State University

george.poste@asu.edu

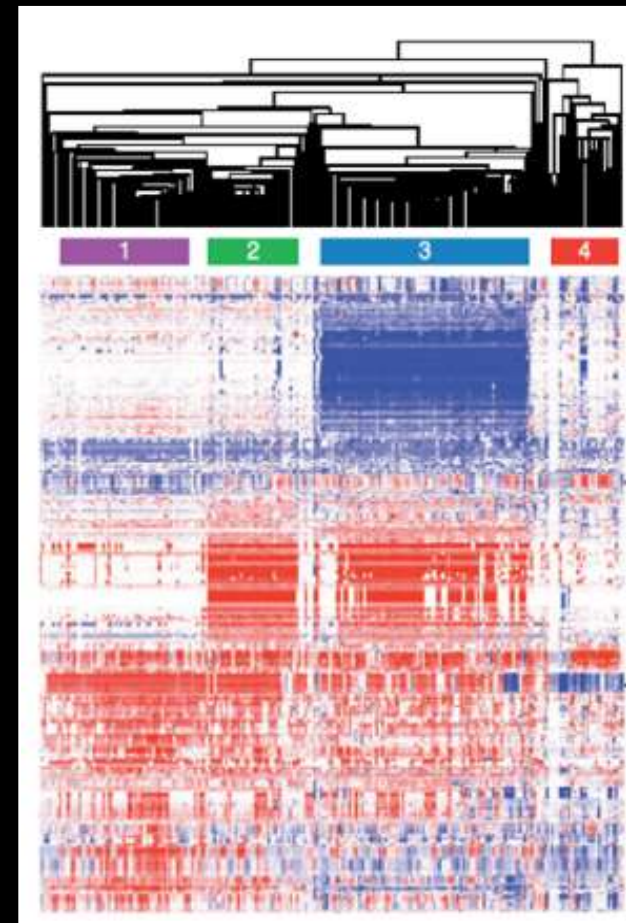

www.casi.asu.edu

Presentation at Cambridge Second Annual Big Data,
Biomarkers and Diagnostics World Congress

Philadelphia, PA

17 May 2016

From Superstitions to Symptoms to Signatures

Molecular Diagnostics and Precision Medicine: PanOmics Profiling and Mapping the Disruption of Molecular Networks in Disease

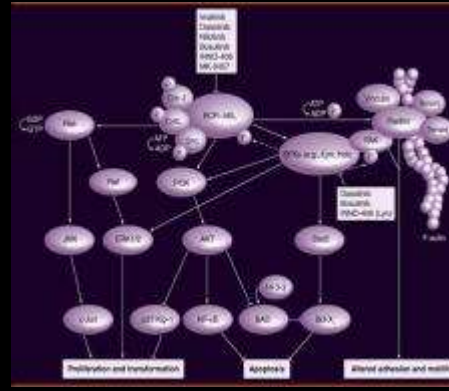

(Epi)Genomics

Proteomics

Molecular Pathways and Networks

Network Regulatory Mechanisms

**ID of Causal Relationships Between
Network Perturbations and Disease**

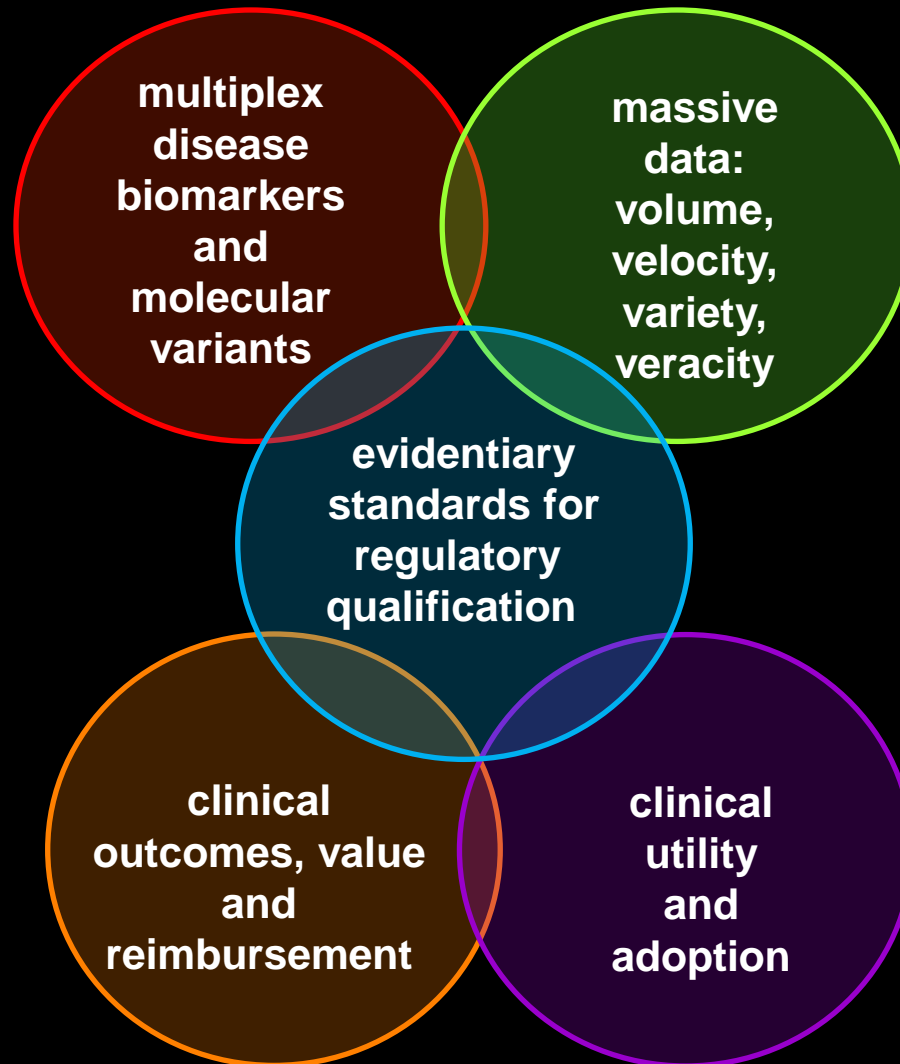

**Patient-Specific Signals and Signatures of
Disease or Predisposition to Disease**

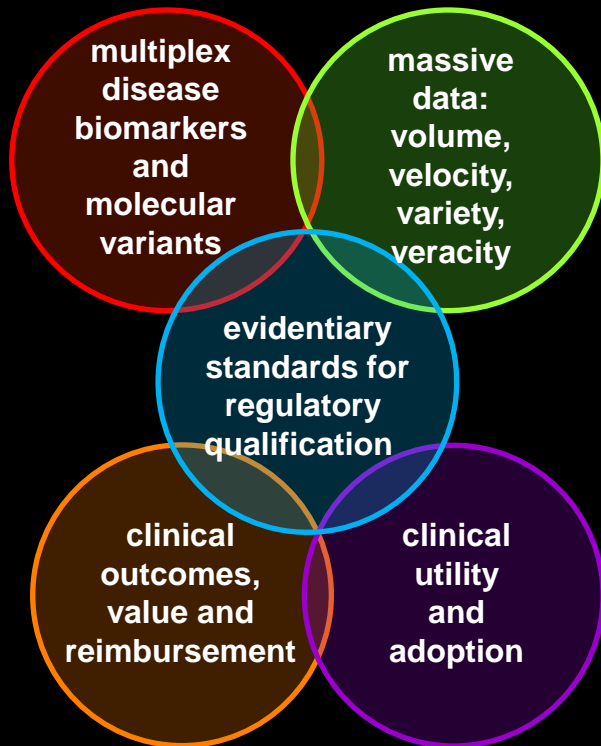

PanOmics Molecular Profiling and Precision Medicine

- **a new molecular taxonomy for disease**
- **intellectual foundation for improved diagnostic accuracy and rational therapy selection**
- **profiling individual variation in disease risk, patterns of disease progression and therapeutic responses**
- **mapping the diversity and dynamic range of disease-associated alterations in the architecture of molecular signaling (information) networks**

Analytical and Clinical Validation Protocols to Demonstrate the Utility of Molecular Profiling in Precision Medicine

Analytical and Clinical Validation Protocols to Demonstrate the Utility of Molecular Profiling in Precision Medicine

DEMONSTRATING VALUE

**DRIVE ALTERED
CLINICAL PRACTICE
TO IMPROVE OUTCOMES
AND/OR LOWER COST**

**REDUCING RISK:
OPTIMIZING PROSPECTIVE
ACTIONS TO SUSTAIN HEALTH
VERSUS REACTIVE RESPONSES
TO DISEASE EPISODES**

Precision Medicine: The Dangers of Reductionism and Ignoring Biological Complexity

Genes For

**The Over-Simplified Perspective That
While Exome-and Whole Genome-Sequencing
Will Reveal the Full Etiology of Disease Pathogenesis**

The Current Reductionist, Simplistic Obsession with Genome Sequencing as the Dominant Platform for Precision Medicine

Informatics Challenges to Advance Regulatory Evaluation of NGS-Based Diagnostics: The Imperative for Analytical and Interpretation Standards

The Exabyte-Zettabyte World Awaits for panOmics Profiling of Large Scale Populations*

- **2015 estimated 3.6 petabases raw sequence data (all species)**
- **c.7 month current doubling time of archived sequences**
- **projected 100 million to 2 billion human WGS by 2025**
- **projected production 1 exabase and 1 zettabase of sequence/year by 2020 and 2025 respectively**
- **Additional need for multiple sequence datasets: (epi)genome, RNA universe, microbiome)**

*Adapted from: Z.D. Stephens et al (2015) PLOS Biology 1002195

Precision Medicine: The Complexity of Genotype-Phenotype Relationships

**Genome Sequencing Alone Will Not Suffice:
The Need for Deep Phenotyping**

**Phenome-Association Data (PheWAS):
Integration of panOmics Profiling with Clinical Disease
Patterns and Treatment Outcomes**

**Understanding the Complex Interplay Between
PanOmics, Environment and Behavior**

Individual Variation, (Epi)Genome Complexity and the Challenge of Genotype-Phenotype Predictions

Junk No More: Pervasive Transcription

- alternate transcription /translation/ (co)splicing
- SNPs, CNVs
- pseudogenes
- indels, SVs
- ncRNAs
- phasing
- epistasis
- imprinting
- silencing
- miRNAs/ ceRNAs/ circRNAs

**recognition of (epi)genome
organizational and regulatory
complexity**

Cell-specific Molecular Interaction Networks

Perturbed Networks and Disease

Molecular Diagnostics and Precision Medicine: Mapping The Topologies and Dynamics of Molecular Signaling (Information) Networks

- “health”
- homeostasis

- subclinical disease
- graded threshold states

- overt clinical disease
- diverse phenomes

network topology

state shifts

Emergence(E)

E_1, E_2, \dots, E_n

The Challenge of Translation of Burgeoning panOmics Data Into Clinically Relevant (Actionable) Knowledge

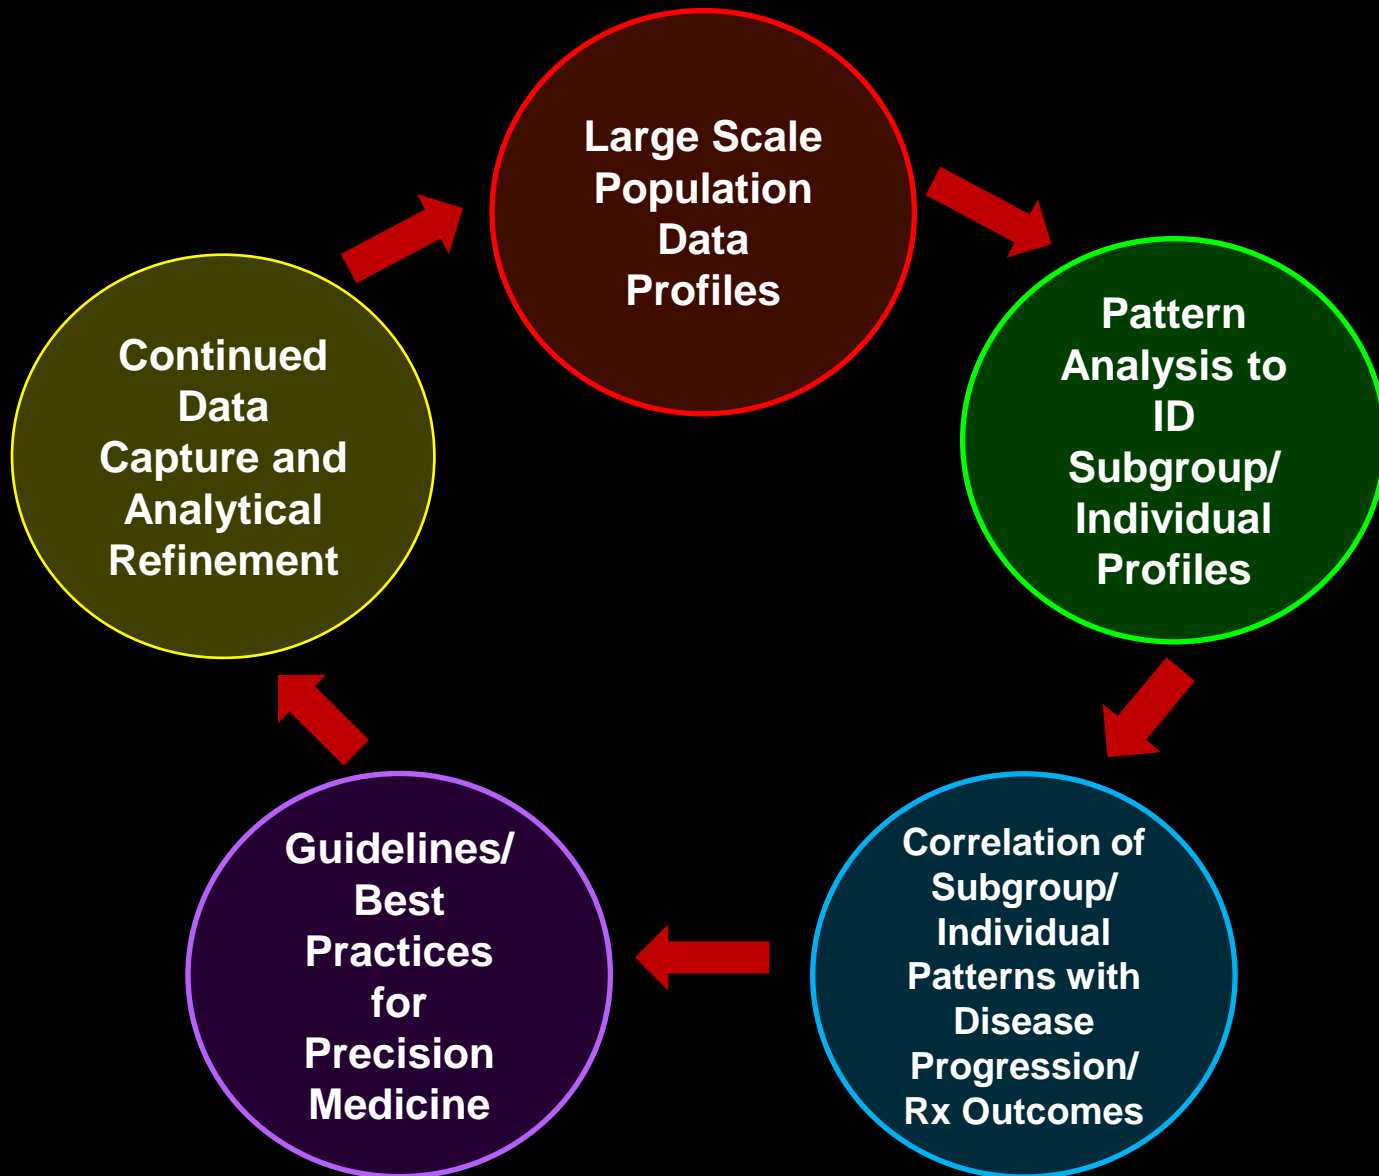

- Data
- Reliability and Robustness
- Biological Insight
- Clinical Utility

?

The Virtuous Circle of Data on Population Health and Individuals in Driving Precision Medicine

The Evolution of a Data-Driven Health Ecosystem: Systematic Integration of Diverse Data Sets for Population Health Analytics

Continuity of Care Record: From Womb to Tomb

Behavior

Environment

Untethering Healthcare From Fixed Clinical Facilities: Extending the Care Space

**The Majority of Events Affecting Individual Health Occur
Outside of Formal Interactions with Health Systems**

**Wearables, Remote Sensors, Mobile Devices and
Real-Time Monitoring of Risk, Health Status and
Treatment Compliance**

Invasion of the Body Trackers: Wearables, Sensors, the Internet of Things and the Focus on Prevention and Wellness

quantified self

telemedicine

**grey technologies and
treatment compliance**

**in-home support and
reduced readmissions**

**wireless monitoring of
implantable devices**

**IoT: escalating device
connectivities**

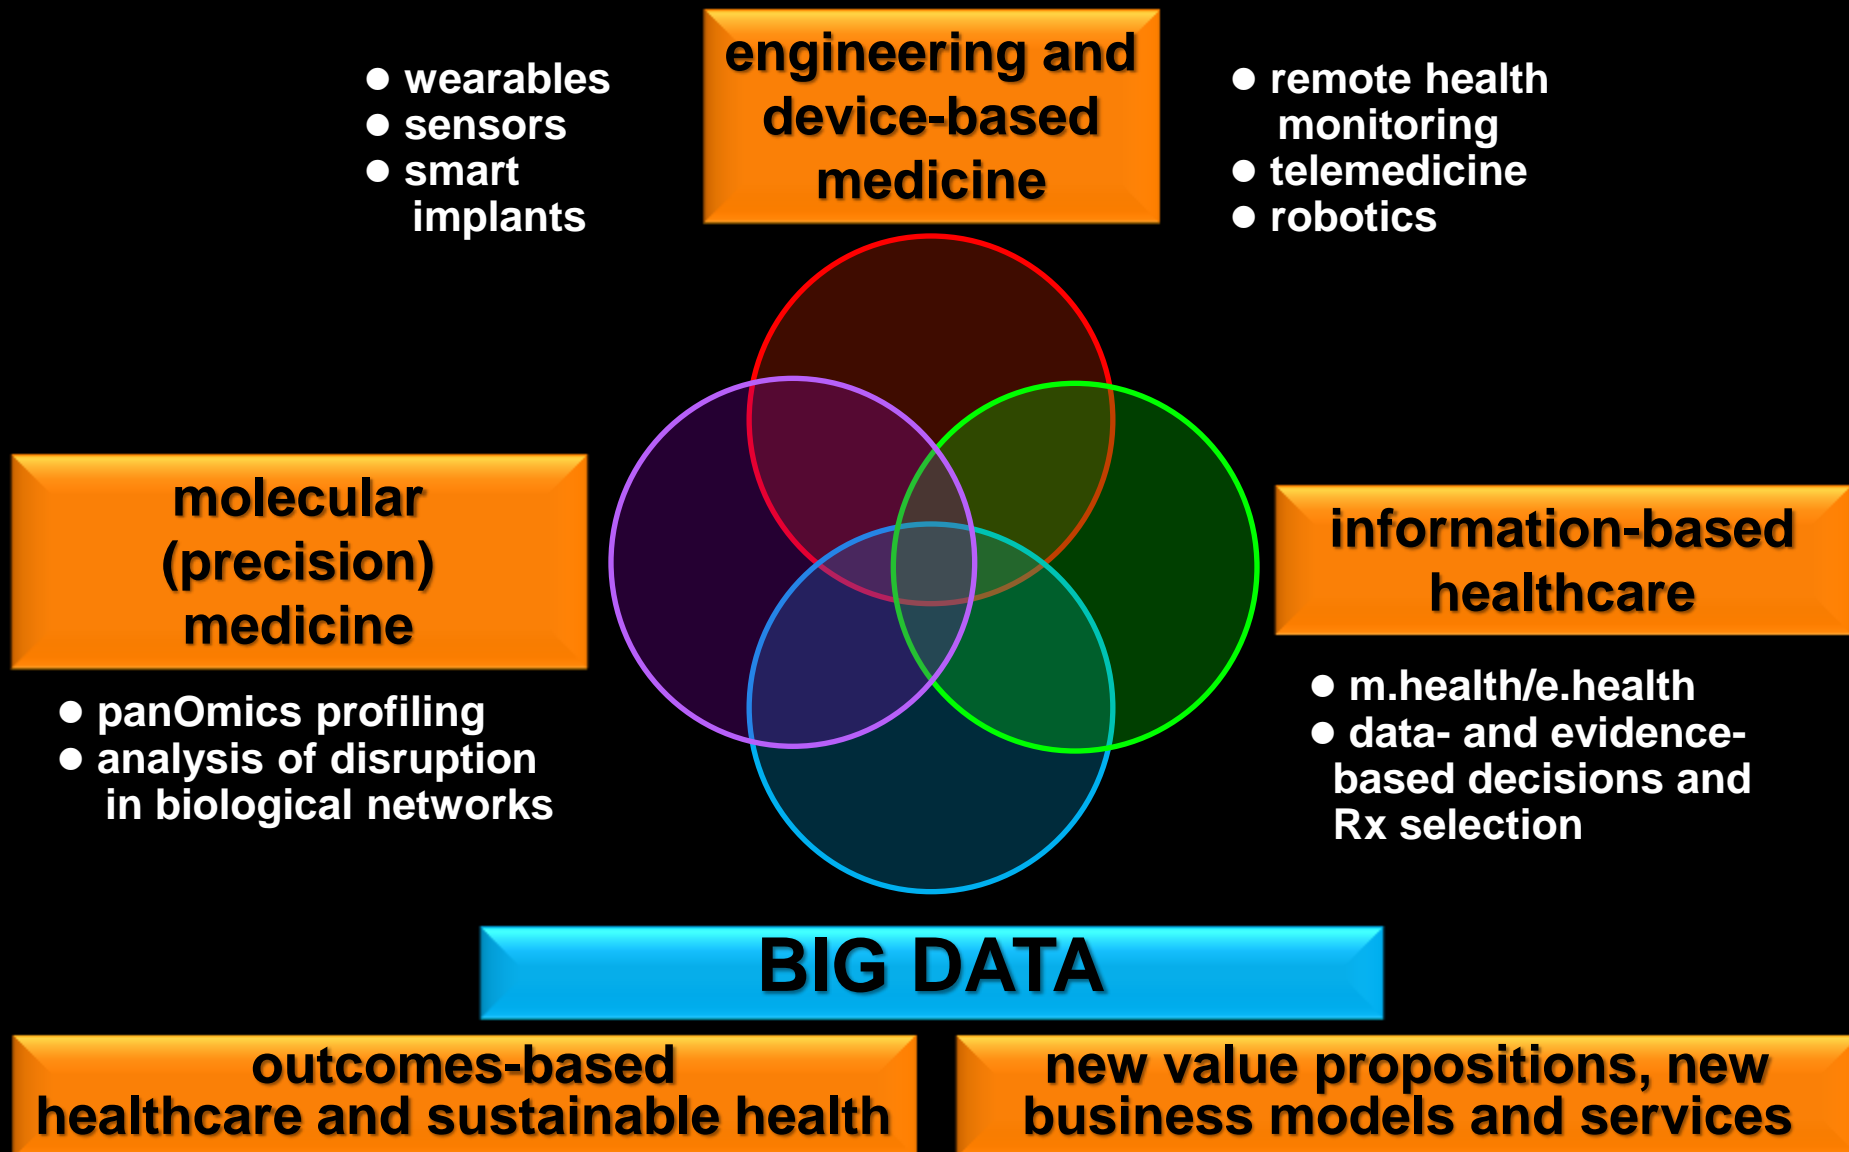

An Apps-Based Information Economy in Healthcare

- **wearables and continuous sensors (individual, populations)**
- **theoretical rationale but integration of data with EHR platforms poses numerous challenges**
 - **lack of developer access to high quality healthcare data to validate app platforms**
 - **cross-platform standardization and application programming interfaces (APIs)**
 - **regulation: accuracy, reliability, security and privacy**
 - **reimbursement (developers and healthcare providers)**
- **FDA focus on apps that transform phone/tablet into a regulated medical device**
- **renewed FTC interest on apps making unsubstantiated claims**

Untethering Healthcare From Fixed Clinical Facilities: Monitoring of Health Status, Compliance and Risk Behavior

- **every encounter (clinical and non-clinical)
is a data point**
- **every individual is a data node**
- **every individual is a research asset**
- **every individual is their own control**

The Principal Forces Shaping The Evolution of Precision Medicine

Now Comes the Hard Part!

Integration of Diverse Datasets in Biomedical R&D and Healthcare

HELL IS THE PLACE WHERE NOTHING CONNECTS — T.S. ELIOT

Silos Subvert Solutions: Protecting Turf and Sustaining the Status Quo

HELL IS THE PLACE WHERE NOTHING CONNECTS — T.S. ELIOT

**WELCOME TO
BIOMEDICAL RESEARCH
AND PATIENT
MEDICAL RECORDS**

The Troubled State of Too Many Data Sets in Biomedical R&D and Healthcare Delivery

- **sloppy science (the reproducibility problem)**
- **statistics (underpowering, overfitting of small N sample sets profiled by large N panOmics feature sets)**
- **silos (data tombs)**
- **sharing (what's that?)**
- **semantics (limited use of common ontologies)**
- **standards (incompatible data formats and dbase inter-operabilities)**
- **safety (source of medical errors, problematic patient ID and match across different records)**

Critical Challenges in the Generation and Analysis of Robust, Large Scale Data in Biomedical R&D and Healthcare

- **scale (exabyte and zettabyte and beyond)**
- **structure (80% unstructured; need for NLE methods)**
- **speed (latency, inadequate infrastructure and few fat pipes)**
- **storage (cost)**
- **security (healthcare records most frequently attacked category in 2015)**
- **surveillance (privacy, consent, data ownership)**
- **states (compliance with patchwork of US state-laws; EU data directive)**

The Emergence of Big Data Changes the Questions That Can Be Asked

**Isolated
Data**

**Complex
Networked
Data**

**Complex
Computational
Data**

The Pending Era of Cognitive Computing and Decision-Support Systems: Overcoming the “Bandwidth” Limits of Human Individuals

- **limits to individual expertise**
- **limits to our multi-dimensionality**
- **limits to our sensory systems**
- **limits to our experiences and perceptions**
- **limits to our objective decision-making**

Advanced Computing and Artificial Intelligence: The Rise of 'Learning Machines' in the Analysis of Massive Datasets and Decision Algorithms

Data-Driven Knowledge, Intelligence and Actionable Decisions

- **changing the nature of discovery**
 - **unbiased analytics of large datasets (patterns, rules) vs. traditional hypothesis-driven methods**
- **changing the cultural process of knowledge acquisition**
 - **large scale collaboration network, consortia and open systems versus individual investigators and siloed data**
- **changing the application of knowledge**
 - **increased quantification, big data analytics and decision-support systems**
- **changing education, training, research and care delivery**

Technology Acceleration and Convergence: The Escalating Challenge for Professional Competency, Decision-Support and Future Medical Education Curricula

Data Deluge

Cognitive Bandwidth Limits

Automated Analytics and Decision Support

Facile Formats for Actionable Decisions

“I Can’t Let You Do That Dave”

Living in a World Where the Data Analytics and Interpretation Algorithms Are Obscure to the End User

- **ceding decision authority to computerized support systems**
- **culturally alien to professionals in their expertise domain but they accept in all other aspects of their lives**
- **who will have the responsibility for validation and oversight of critical assumptions used in decision tree analytics for big data?**
 - **regulatory agencies and professional societies (humans)?**
 - **machines?**

“DNR”

- Denial
- Negativity
- Resistance
