Panel Presentation: Big Data-Challenges and Social Impacts
AAAS Annual Meeting
San Jose, California
February 13, 2015

The Imperative to Achieve Sustainability in Healthcare: Societal (Economic) and Individual (Wellness)

Balancing Infinite Demand Versus Finite Resources

**More Effective Management of Chronic Disease
in Aging Populations**

**Shift From a “Do More, Bill More” (FFS) Delivery of Care
to Integrated Continuity of Care**

**Managing Individual Risk to Improve Outcomes
and Control Cost**

Technology, Innovation and New Value Propositions

Precision Medicine: Understanding Molecular Signaling (Information) Pathways in Health and Disease

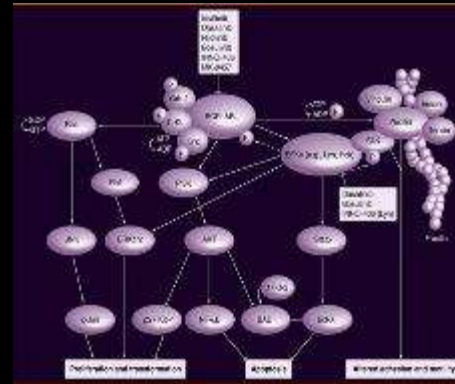

Genomics

Proteomics

Molecular Pathways and Networks

Network Regulatory Mechanisms

**ID of Causal Relationships Between
Network Perturbations and Disease Subtypes**

**Patient-Specific Signals and Signatures of Disease
or Predisposition to Disease and Targeted Rx**

The Principal Forces Shaping Biomedical R&D and Healthcare Delivery

- molecular diagnostics
- sensors

device-based medicine

- remote health monitoring
- telemedicine

molecular (precision) medicine

- panOmics profiling
- integrated analytics of biological networks

information-based healthcare

- m.health/e.health
- data- and evidence-based decisions and Rx selection

outcomes-based healthcare and sustainable health

new value propositions, new business models and services

BIG DATA

The Changing 'Touch Points' in Healthcare Delivery

**Sensors, Smart Devices, Social Media and
New Distributed Channels for Remote Health Monitoring**

M4: Making Medicine More Mobile

AORTA (Always On Real Time Access), Healthcare and Wellness

- **majority of events affecting an individual's health occur outside of healthcare facilities**
- **progressive migration to seamless blend of online and physical care and support services**
- **cultivate same expectations and engagement as other consumer-centric industries**
- **mass personalization**
- **innovation, insights, infrastructure and incentives**

m.Health

**Real Time
Remote
Health
Monitoring
and
Chronic
Disease
Management**

**Lifestyle
and
Fitness**

**Information
for
Proactive
Health
Awareness
(Wellness)**

Telemedicine: Diagnostics, Robotics, and Remote Monitoring of Health

Implantable Devices and Wireless Monitoring (and Modulation)

“Lab-On-Me” and “Lab-Always-On” Dissolvable Electronics and Biodegradable Sensors

- **dissolution of electronic circuits in physiological conditions**
- **construction from water-soluble, non-standard electronic materials with specific dissolution rates**

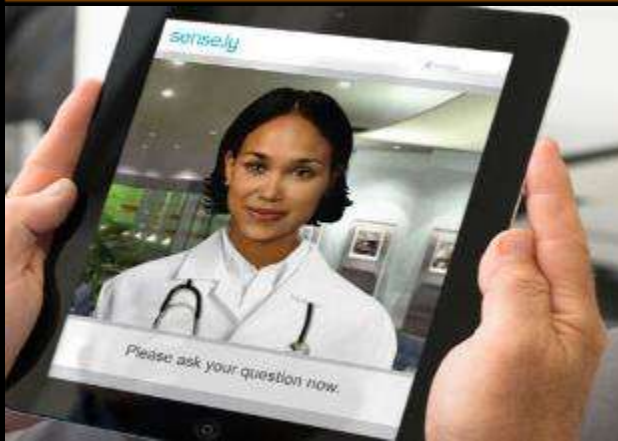

Gray Technologies: Independent But Monitored Living for Aging Populations

Rx compliance

**cognitive
stimulation**

**in home support and
reduced readmissions**

reduced office visits

Retail Healthcare: New Services and Value-Based Shopping for Healthcare

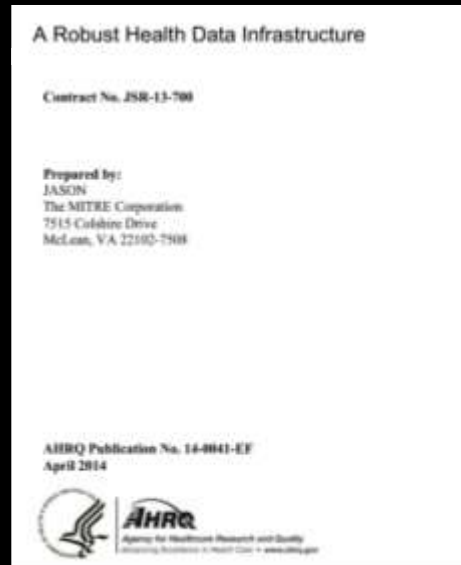

Social Spaces Become Quantifiable

- **who knows why people do what they do?**
 - **the fact is that they do!**
- **these actions can now be traced and measured with unprecedented precision**
- **with sufficient data, the numbers reveal increasingly predictable behavior individual risk patterns**
- **new business opportunities in multiple sectors including healthcare**
- **new ethical and legal issues**
 - **consent, privacy, surveillance, security**

- **recruitment of 1 million participants**
- **from profiling every two years (Framingham) to daily monitoring**
- **longitudinal observational monitoring with every individual acting as own control**
- **large sample size and avoidance of selection bias**
- **1.5% cohort = entire Framingham study (15,000 participants)**

Connecting Health and Care for the Nation: A 10-Year Vision to Achieve an Interoperable Health IT Infrastructure

Overview

The U.S. Department of Health and Human Services (HHS) has a critical responsibility to advance the connectivity of electronic health information and interoperability of health information technology (health IT). This is consistent with its mission to protect the health of all Americans and provide essential human services, especially for those who are least able to help themselves. This work has become particularly urgent with the need to address the national priority of better and more affordable health care, leading to better population health. Achieving this goal will only be possible with a strong, flexible health IT ecosystem that can appropriately support transparency and decision-making, reduce redundancy, inform payment reform, and help to transform care into a model that enhances access and truly addresses health beyond the confines of the health care system. Such an infrastructure will support more efficient and effective systems, scientific advancement, and lead to a continuously improving health system that empowers individuals, customizes treatment, and accelerates cure of disease.

In the past decade, there has been dramatic progress in building the foundation of a health IT infrastructure across the country that is resilient and flexible to accommodate many types of change. Through deliberate policy and programmatic action, the majority of meaningful use¹ eligible hospitals and professionals have adopted and are meaningfully using health IT. This progress has laid a strong base upon which we can build. However, there is much work to do to see that every individual and their care providers can get the health information they need in an electronic format when and how they need it to make care convenient and well-coordinated and allow for improvements in overall health. There is no better time than now to renew our focus on a nationwide, interoperable health IT infrastructure – one in which all individuals, their families, and their health care providers have appropriate access to health information that facilitates informed decision-making, supports

¹ Formally referred to as the Medicare and Medicaid EHR Incentive Programs

A Ten Year Vision to Achieve Interoperable Health IT Infrastructure

Healthcare as a Complex Information Ecosystem

**From Fragmented Silos of Reactive
Incident-Centric Care to Systems-Based
Integrated Frameworks for increasing Proactive
Management of Individual Risk**

The Pending Zettabyte Era

1,000,000,000,000,000,000,000,000

Managing Big Data in Biomedicine is Not a Simple Extrapolation from Current Practices

Current Institutional Structures and Competencies Are Ill-Prepared for Pending Disruptive Change

Biomedical R&D and Clinical Medicine: an Unavoidable Transition to Data and Computation Intensive Methods

Current Era

- **opinion-rich, information content-poor**
- **qualitative, descriptive data**
- **fragmented care provision and flawed clinical decisions**

Biomedical R&D and Clinical Medicine: An Unavoidable Yet Essential Transition to Data- and Computation-Intensive Processes

The Pending Era Massive Data: V5 and D3

- **V5: volume, velocity, variety, veracity, value**
- **D3: dynamics, dimensionality, decisions**
- **new machine-based analytics for management of mega-metadata, customized distribution and decision-support**

The Future of 'Search' and 'Retrieval'

Deep Understanding of Content and Context

Collapse 'Time to Decision': Intelligence at Ingestion

**Automated and Proactive Analytics:
Why Wait for the Slow Brain to Catch Up to the Fast Machine**

- **limits to individual expertise**
- **limits to our multi-dimensionality**
- **limits to our sensory systems**
- **limits to our experiences and perceptions**
- **limits to our objective decision-making**

The Extended Cognosphere: Automated Analytics, Robotics and Machine Intelligence

Massive Computing Power and Analytic Parsing

- mega-meta data • open source data • personalized data
- data science • decision science • data security

**The Growing Education and Knowledge Gaps
in Comprehension of Molecular Medicine Concepts
By Healthcare Professionals**

Technology Acceleration and Convergence: The Escalating Challenge for Professional Competency, Decision-Support and Future Education Curricula

Data Deluge

Cognitive Bandwidth Limits

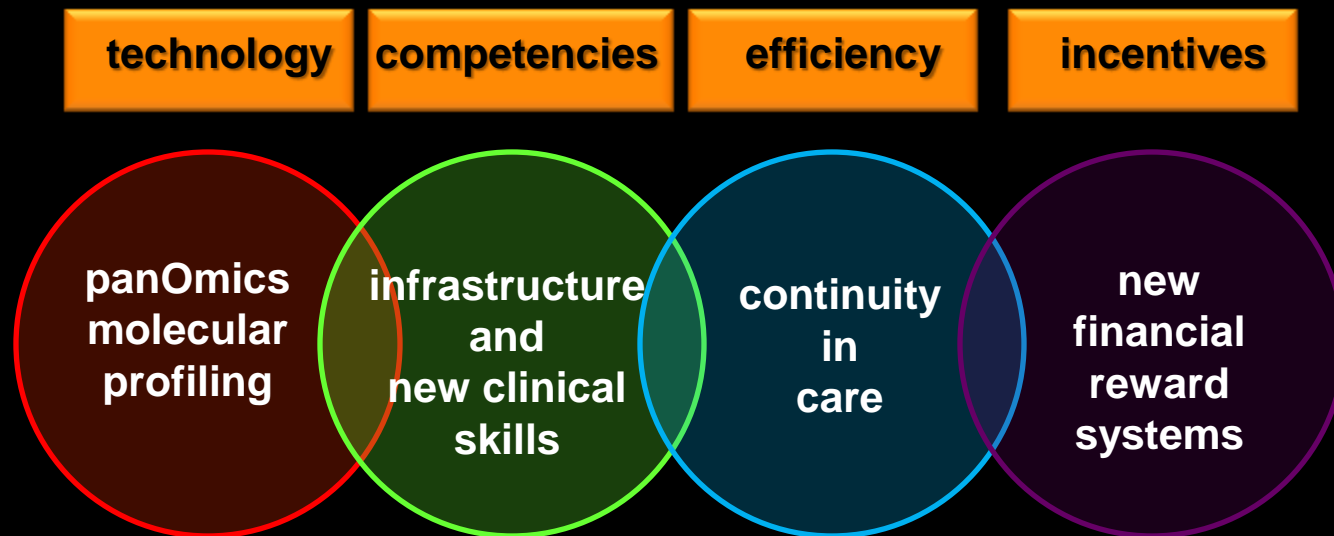

Automated Analytics and Decision Support

Facile Formats for Actionable Decisions

Leveraging the Potential of Precision Medicine Will Require **PROFOUND CHANGES** in the Organization and Proficiency of Healthcare Services

- seamless integration of healthcare data for real-time access and improved care decisions
- shift from reactive episodic care encounters to increasingly proactive risk mitigation
- progressive shift from management of overt disease to sustained wellness

Building Knowledge Networks to Improve Individual Health and Sustainable Healthcare Systems

Data Analytics and Clinical Decision Tools

**panOmics
sensors/devices**

**molecular profiling of patients
(precision medicine)
and global disease surveillance
(public health)**

**mapping the
dysregulation of
biological networks
in disease**
